INTRODUCTION

Movies are the fantasy worlds where dreams come true. The film industry has spawned millions of dreams and is one where many make and break careers. Being one of the highest grossing industries, the cinema will forever be a part of us and many among us aspire to be a part of it as well.

Cinema has been a source of entertainment from 1895, and ever since the impact it has created is unparalleled. Movies not only provide a great escape from reality but also offer wider perspectives and broaden our views as individuals and as a society. Movie making is a unique art which puts together the hardwork of hundreds of talented people.

With advancements in science and technology and with new movies releasing everyday, the influence of cinema in today's era is beyond words.

Conducting a survey among the teenagers would provide a radical source of data and also insights on the movies and genres that cater to the needs and wants of today's young minds.

AIM

Carry out a survey among teenagers on most influential movies they have watched and list out the most popular reasons.

QUESTIONNAIRE

- ⇒ Which is your favourite movie genre?
- ⇒ Which movie do you like the most?
- ⇒ Which is your favourite character(s) in the movie? Why?
- ⇒ What did you like the most in the movie?
- ⇒ How did the movie influence you?
- ⇒ What is your opinion about the casting of the movie?

SURVEY REPORT

Based on the survey, most youngsters love watching thriller, romantic and comedy movies. Other favourite genres include drama, fantasy and action.

One of the major reasons of the popularity of thriller movies is the stimulation that it offers and is experienced. Exposure to terrifying acts or even the anticipation of such alarming situations, causes stimulation both mentally and physically and in opposing ways too - positively, as in the cases of joy or excitement, or negatively, as in fear or anxiety.

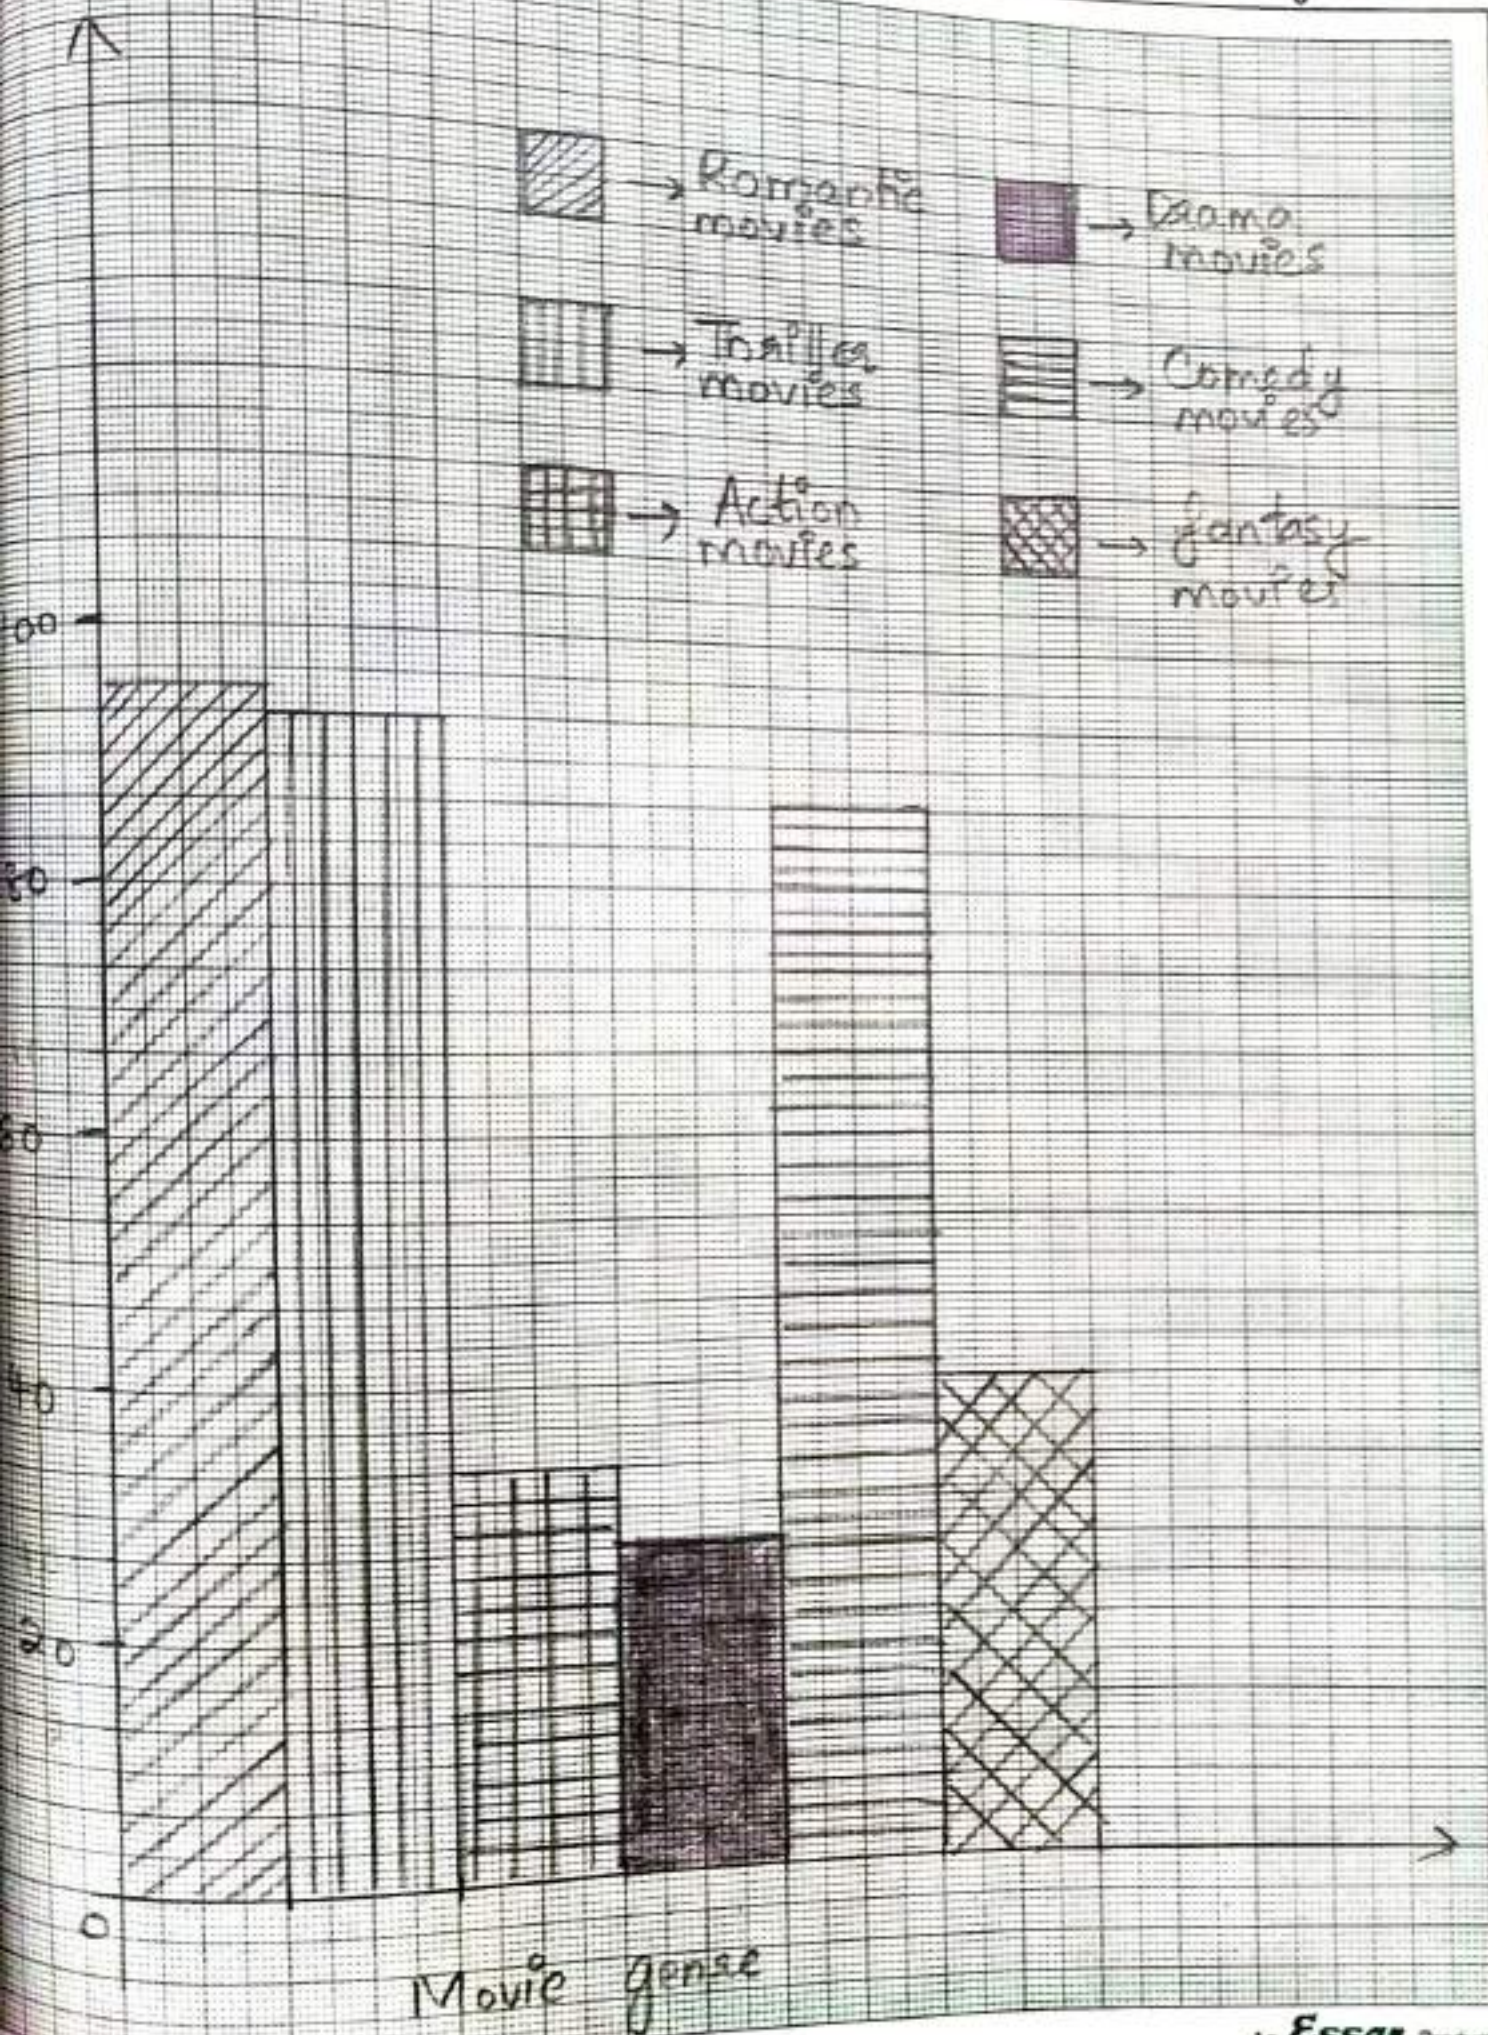

The release of oxytocin may contribute to the love of romantic comedies because of its association with positive memories and happy hormones. Watching them can release stress that calms the viewers and also allow them to feel a range of deeper emotions just at the expense and within the comforts of a movie theatre.

Comedy movies provide

the much needed relief after a hard day which can enhance our mental health, reduce blood pressure, promote love and peace in family households.

These are the very few among millions of reasons why people love movies, especially thrillers, romances and comedies when in comparison to other genres.

Another interesting fact found in the survey, is that the choice of movies is not influenced or more likely bounded by the fences of language or that of a particular industry. Today's youngsters can access movies worldwide and that is shown in the preference of cinema opted.

CONCLUSION

By analysing the data as a whole, we get to the conclusion that movies appeal to different minds in different ways. Even when the favourite genre was the same, not even a single movie was repeated which represents the diversity in the outlook of young adults.

Most of the students (the surveyees) found the cast of the movie to be perfectly fit and also the right casting can be the reason why movies are opted to be watched.

Even though movies, majority of them, serve the purpose of entertainment, there are also documentary films which accommodates the need to provide knowledge through cinema. But such movies, unfortunately, do not reach the adolescent minds as they should be.

Nevertheless, movies will forever educate and entertain us not just in a certain age but during all times and all emotions.
